

# WIP361

## Cloud-Powered Production Tracking Solution

Our WIP361 solution **transforms and optimizes** your entire production monitoring process with a **cloud-based** platform that **eliminates communication gaps and manual tracking**. Leveraging configurable templates and mobile data capture, it delivers **complete purchase order traceability, operational visibility, and proactive risk management** through **real-time dashboards and automated delay alerts**. The solution seamlessly integrates production data from multiple sources including web portals, Excel, and mobile scanning, with all information available for **ERP synchronization**. This highly adaptable system scales across multiple factories and brands, providing stakeholders with **complete oversight and command** over manufacturing milestones.

### End-to-End PO Milestone Tracking

WIP361 delivers complete production visibility, tracking every purchase order from confirmation to commercial invoice with full milestone accountability.

### Customizable WIP Template Configuration

Create tailored production monitoring templates for different buyers, brands and product categories, ensuring each supply chain partner follows standardized yet customized tracking protocols.

### Integrated Supply Chain Visibility Platform

Built on TradeLink's cloud infrastructure, WIP361 synchronizes production data with your existing ERP and logistics systems, creating a unified visibility platform across your entire supply chain ecosystem.

### Proactive Delay Alert System

Automated alerts and color-coded tracking provide early warnings of delays, enabling proactive intervention to protect shipment schedules.

### Multi-Source Production Status Updates

Capture real-time manufacturing data through flexible input methods - web portal, Excel bulk processing, or mobile QR code/RFID scanning - adapting to various factory capabilities within your supply network.
